

DEFENSE TECHNOLOGY CONFERENCES

Disaster & War Surgery

The purpose of Disaster and War Surgery is; To reduce deaths and injuries resulting from trauma, which are serious social problems in military and civilian life, and to reduce deaths to acceptable levels. For this reason, healthcare personnel must have knowledge of trauma and resuscitation information and know the principles of current medical approach to injured and traumatized patients. Early life-saving interventions in trauma conditions, damage control surgeries performed by front-line surgical teams, and advances in medical evacuation systems enable effective treatment and reduce mortality rates. In the webinar, information will be given about the principles of treatment approaches in recent years and the intervention strategies that have been implemented or recommended to be implemented in the field.
